

Summary report

## WELLINGTON REGION

# 2022

## State of NZ Garden Birds

Te Āhua o ngā Manu o te Kāri i Aotearoa

### NUMBER OF SURVEYED GARDENS

We have estimated how bird counts have changed over the last 10- and 5-year periods in different regions, districts, and neighbourhoods across New Zealand for 14 common garden visitors – five native and nine introduced birds.

Thanks to all our volunteer bird counters, 44,357 garden surveys have been completed nationwide since 2012. We use specialised statistical tools to account for variation in sampling effort between regions, districts, and suburbs over time. We also account for variation in bird counts depending on whether the surveyed gardens were in a rural or urban setting, and whether birds were fed or not. Finally, we correct for the actual number of gardens in each area.

We then classify these changes according to their direction and size (see diagram below) to help us identify changes of potential concern or interest.
